2014 WinField Internships

1. Sales Internships
Our sales internships can offer a wide variety of experiences. These can help you understand how to work with growers, dealers, and manage overall opportunities while representing a reputable company. You will learn skills that can clarify business practices used in the daily business, and give you experience to help yourself be confident in your career path in Sales. This background will help you with technical skills or even learn the latest technology such as satellite imagery. Multiple options are available to help represent several different types of opportunities within our business units.

Internships could include these roles: Seed and Agronomy Advisor, Business Manager, Master Agronomy Advisor, Professional Products Group, R7 Specialist

2. Research Internships
These internships will help an individual understand the process to research current products in the market and see the processes it takes to also potentially release new products in the market. Jobs will require in-field work, as well as potentially some lab work to come up with the data and insights to help WinField make great decisions for the future.

If you are interested in the largest research program in America, you may have interest in working as an Answer Plot Intern. This internship will work with highly technical equipment, processes, and agronomic data that can outline a thorough portfolio of products and information. This internship would be a great opportunity for someone who likes to be active in the field.

Internships could include these roles: Crop Protection Research, Corn Characterization, Corn Breeding, Answer Plot

3. Agronomy Internships
Are you an individual that likes to work with soils, plants, and showing/demonstrating to people the best practices there are within Agronomy? If so, the agronomy internships will help you discover methods that work in particular environments and apply them to current practices. This is a great step if you enjoy being a hands-on agronomist and sharing your knowledge with others.

Internships could include these roles: Regional Agronomist, Plant Nutrient Specialist

4. Marketing Internships
If your interest in the Agricultural sector is finding ways to better promote, support, and find new methods to enhance a program, these are great internships to apply for. You can apply for a particular sector of our market and spend the summer helping our teams demonstrate different options to help improve their markets or help us research other practices to enhance a growing market. In addition, you will also gain valuable agronomic understanding of our products and practices.

Internships could include these roles: HIF (Herbicide Insecticide, Fungicide), Adjuvants, Large Grower, Forage Management, Marketing Professional Products Group (PPG)

To apply for these internships and more, apply online at www.campus.landolakes.jobs
