Plan well for the threat of aflatoxin in corn

1. Plan your marketing strategy by sampling corn during maturity and testing for aflatoxin.
2. Aflatoxin is localized and sampling must be thorough. Take many samples and average the results.
3. Choose the market where aflatoxin is acceptable: cattle can tolerate more aflatoxin than poultry and poultry more than dairy. Check the aflatoxin limits on the Office of Texas State Chemist web site (web@otsc.edu).
4. Know your product and market it accordingly.
5. Build confidence with your market by being informed and having data to support it.
